Work Experience

Data Scientist - Full Time, OVS – Bari, BA May 2025 – Present

- Built and deployed an intraday sales forecasting system (1,000+ stores, 5 daily predictions) replacing a rule-based model with XGBoost using feature engineering (weather, lags, calendar, promotions and more), handling cold-start, non-recurring events and explainability through SHAP values.
- Productionized distributed ML pipelines on Databricks (PySpark, MLflow, asset bundles), managing full model lifecycle (training, tuning, deployment and monitoring)
- Led a small team in designing and integrating an additional explainability module for the XGBoost.
- Designed and built a product lifecycle prediction system (first and last sale week per item and store) with k-NN over visual embeddings retrieved through Vector Search and multi-year sales history; end-to-end PySpark pipeline with parent-item aggregation and store clustering, plus an error evaluation framework (MAE, bias, tail analysis) supporting assortment planning.

Data Analyst - Internship, Baker Hughes – Bari, BA Sept 2024 – May 2025

- Developed Python pipelines to integrate data from multiple sources and link sales orders to machine S/N, achieving ∼95% match on transactions.
- Built interactive Power BI dashboards used by leadership to steer sales strategy.

Software Developer - Internship, Alten - IT – Bari, BA June 2021 – Jan 2022

- Contributed to full-stack projects (C#, Entity Framework, Angular), including an internal HR-oriented tool and a customer database applet.
- Developed a process automation using Microsoft Power Automate Desktop to streamline workflows.

Projects

Portfolio - *Personal Page* github.com/GianFederico?tab=repositories

- *@food_recsys_bot* [Master's thesis project]: Recommender system within a chatbot interface for healthy recipes, focused on persuasive explanations to encourage users to adopt healthier eating habits.
- *Anomaly Detection* : Python comparison of novel methods for anomaly detection through computer vision in the agri-food supply chain, specifically exploring Autoencoders and Self-Organizing Maps;

Skills

AI: Python, Deep Learning, scikit-learn, TensorFlow, PyTorch, OpenCV, Rec Systems, Vector Search, MLflow;
ML Engineering & Data: Databricks, PySpark, Pandas, NumPy, SQL, DagsHub, Pytest, Power BI, Tableau;
SW Engineering: Python, C#, Java, Git, GitHub, Angular, HTML, CSS, Entity Framework, Power Automate;
Languages: Italian (Native), English (C1 – University Certification);

Education

University of Bari "Aldo Moro" – Master of Science in Computer Science for AI [ENG] April 2024
University of Bari "Aldo Moro" – Bachelor of Science in Computer Science [ITA] June 2021

About Me *- 04/11/1995*

In my free time I enjoy traveling, PC-gaming, tabletop role-playing games (both as a player and GameMaster), and working out, after all "*a healthy body fosters a healthy mind*".

Other Working Experiences

Driver – Volkswagen Zentrum Bari S.R.L. 2021-2022
Janitor – Convitto Nazionale "D. Cirillo" 2020-2021
Retailer – Masseria di Puglia at Artigiano in Fiera 2018-2020
Sport-Supervisor – Children's summer camps at ASD Pineta Basket's 2013-2017
